Engineering Release Notes
Firmware Version: CXD2500_R0.86.2

CXD2500_R0.86.2_MMDD.img: Standard, generic routed mode image. This must be used for all customer PoCs and installs.

CXD2500_R0.86.2_Ph1A_MMDD.img: Juniper replacement image in specific Phase 1A configuration. Must be used for Juniper replacements in Phase 1A mode only. Can be re-configured to generic, routed mode from Ox after CXD connects to Ox.

Best Practices: It is always recommended that you reboot your CXD prior to upgrade— all upgrades if possible, should be done on a wire line.

Additions/Fixes in this release:

Recommended upgrade path:

Reboot prior (first)

.83 to .85 to .86.2

Reboot first back online then upgrade

.85 to 86.2

Reboot first

All versions to 86.2
