Abstract

This guide provides instructions to export the Resource Inventory from AWS portal.

Note:

The screen/ figure references are only for illustration purpose and may not match the installed product UI.

Scope

The instruction in this guide is consistent with Amazon Web Services.

Audience

This guide is for all Netsurion Open XDR users responsible for investigating and managing network security. This guide assumes that you have Netsurion Open XDR access and understanding of networking technologies.

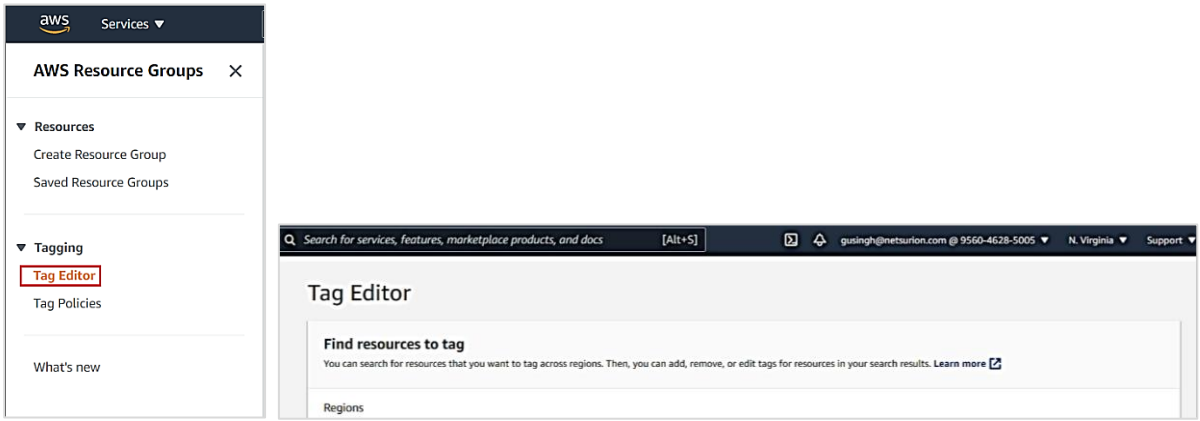
1 Prerequisite

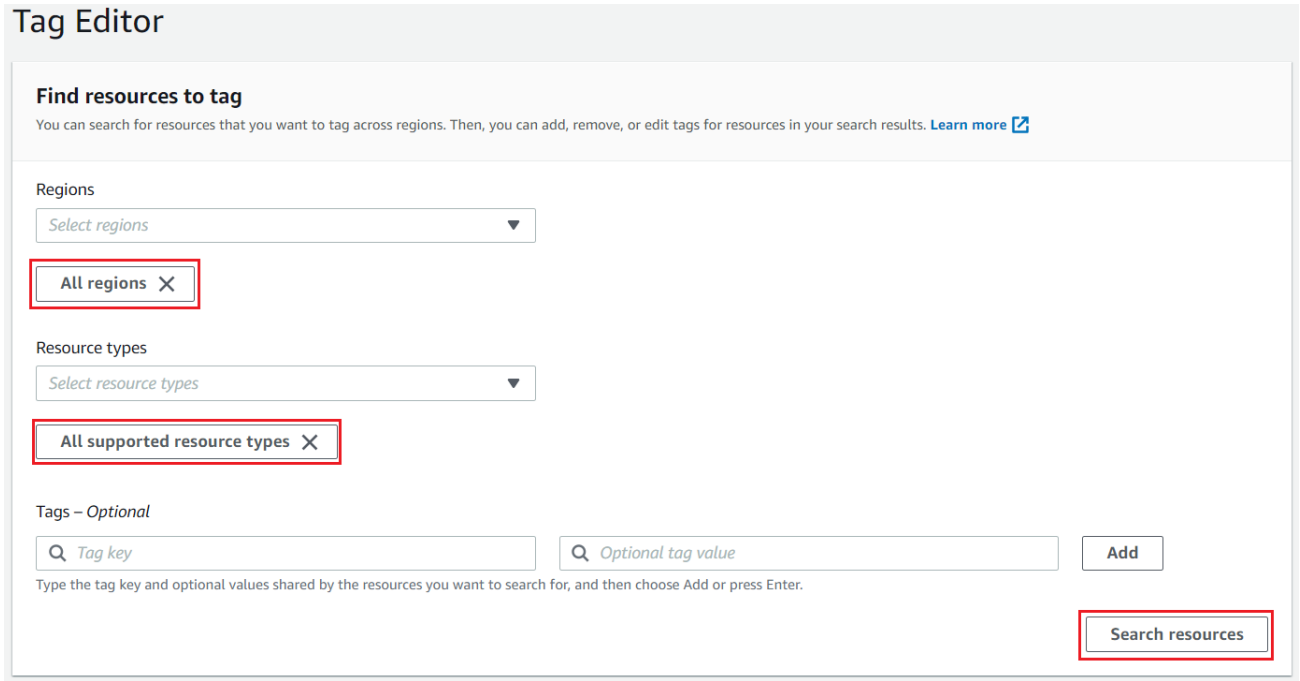
- Administrator or Resource Group and Tag Editor access to the AWS portal.

2 Downloading and Exporting Resource Inventory

1. Log in to AWS Resource Groups and navigate to **Tag Editor**.

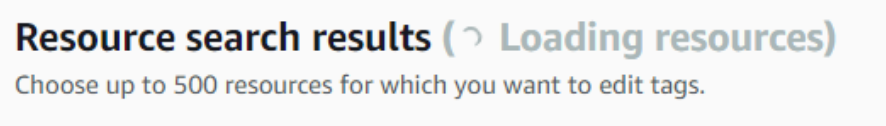


2. In **Tag Editor** > **Find resources to tag** section, specify the following details, and then click **Search resources** to search for the resources.
   - Specify Regions as **All regions.**
   - Specify the Resource types as **All supported resource types.**

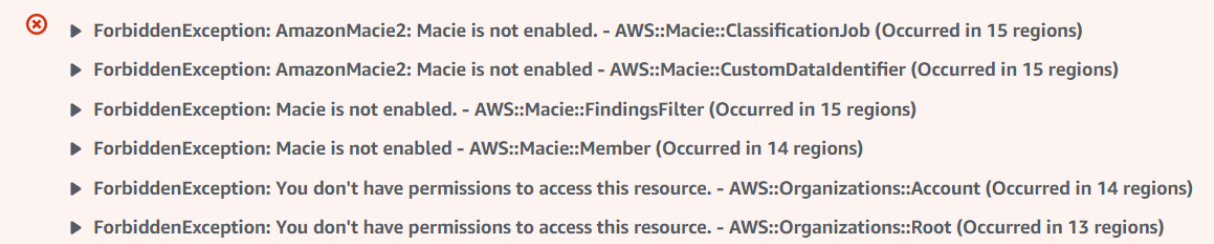


© Copyright Netsurion. All Rights Reserved.

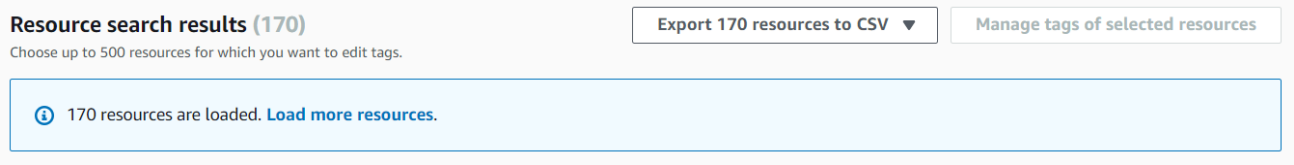
Wait sometime for the search to complete.



Sometime, the following error occurs when we are not using resources in any or all regions, and you shall ignore it.



3. After the search is complete, it will display all the resource count and resource used in the AWS environment.



4. Click the **Export** drop-down list, and then click **Export all tags**.

The Export all tags downloads resources in.csv file format which contains inventory of customer resources.

Identifier	Tag: Name	Service	Type	Region	Tag: aws:c	Tag: aws:c	Tag: aws:c	Tag: lambc	Tag: servel	Tag: servel	Tags
